General Cupola Information

- Please see instruction sheets for installation instructions and to determine proper cupola sizing.
- All cupolas are available in **AZEK** material. Azek material is widely known in the building industry as an extremely beautiful and durable product. Azek products have the look, feel and sound of premium lumber without any of the maintenance issues associated with wood products. Azek resists moisture and insects, and will not rot, cup or decay. Azek does not need paint for protection, however it does have excellent paint adhesion and can be painted to achieve a custom color. Our Azek cupolas are assembled with stainless steel fasteners that will not rust or decay.
- All cupolas are also available in a premium grade of Cypress lumber known as "Select" grade that can be painted, stained or finished with wood sealer.
- All cupolas also can be special ordered in Western Red Cedar.
- All cupolas come in three sections (roof, middle & base) for ease of handling and installation.
- All cupolas are weathervane ready for easy weathervane mounting.
- Optional screening available on all cupolas.
- All cupola bases will accommodate up to a 10/12 roof pitch. Optional extended bases for steeper roofs are available.
